

GLOBAL HEALTH PROGRAM: PROGRAM GUIDE 2022

Introduction

The Global Health Program in Ghana, since its inception in 2012, has maintained its goal of helping underserved communities in Africa to create free, accessible and sustainable healthcare systems. The program has focused mainly on maternal & women's health, preventive care and pediatric medicine. The program is working with four communities in Ghana to establish community clinics. These clinics are located in underserved villages with the goal of providing free maternal and preventive care services. The clinics under construction are located in Sheini in the Kumbungu District of the Northern Region, Kwasilansa in the Mankesim District of the Central Region, Kansanso in the Asante Akyem North District of the Ashanti Region and Kpila in the Upper West Region of Ghana.

Outlook for 2022

The Global Health Program in 2022 will advance the ongoing clinic projects. Doctors, students and volunteers will interact with community leaders and villagers to understand their healthcare needs and find ways to enhance the projects.

There will be an attempt to explore other underserved communities in and outside of Ghana to expand the program and bring free, assessable and sustainable healthcare to more communities.

Itinerary

The healthcare program for 2021 is scheduled to take place from December 18th, 2021 to January 9th, 2022. Participants will fly into Accra Ghana and visit all four clinic sites. There are plans to explore a 5th clinic site in Botswana. The tentative plan is as follows.
